Summary

Computer Science graduate who builds and ships full-stack, AI-powered web apps. Launched Arguen, a live AI-judged debate platform with hundreds of visitors and Razorpay billing, and MergeIQ, a GitHub App and Chrome extension that reviews pull requests with AI. Curious about new technologies and dedicated to building innovative solutions.

Education

VIT-AP University, Amaravati, Andhra Pradesh
B.Tech in Computer Science and Engineering
Vidya Bharati Chinmaya Vidyalaya, Jamshedpur
Senior Secondary (CBSE)

Graduated: September 2026
CGPA: 8.56 / 10
Class 10: 2020 Class 12: 2022
Class 10: 94.4% Class 12: 83.2%

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, Java, HTML/CSS
Frameworks: React, Next.js, FastAPI, Flask, Tailwind CSS, shadcn/ui
Data & Backend: PostgreSQL, Supabase (Auth, Realtime, RLS), Drizzle ORM, REST APIs, WebSockets, Webhooks
AI / LLM: Gemini API, OpenAI API, Anthropic API, prompt engineering, structured JSON outputs
DevOps & Cloud: Git, GitHub Actions, Docker, Vitest, Sentry, PostHog, AWS, Google Cloud Run, Vercel, Railway, Render

Projects

Arguen – Competitive Live Debate Platform [Live] | [GitHub]

Next.js 16, TypeScript, Supabase (Postgres, RLS, Realtime), Drizzle ORM, Gemini API, Razorpay, Vercel

- Built and launched solo a real-time debate platform where two players argue timed rounds under a Gemini AI judge that scores 4 dimensions and detects 16 logical fallacies.
- Architected 48 API routes and 47 SQL migrations on Supabase Postgres (Row-Level Security) for Elo-based ranked matchmaking, live spectating, and Realtime score sync.
- Integrated Razorpay subscriptions with signature-verified, de-duplicated webhooks; wrote 116 Vitest tests run on every push via GitHub Actions.
- Results:** 613 unique visitors, 1,130+ sessions (PostHog); 99.99% crash-free sessions (Sentry).

MergeIQ – AI-Powered Pull Request Analyzer [GitHub] | [Live API]

Python, FastAPI, Chrome Extension (Manifest V3), Gemini 2.5 Flash, GitHub REST API, GitHub Apps, Railway

- Built a Chrome extension and GitHub App that analyze pull requests with Gemini, returning a Safe / Review Needed / Risky verdict, risk flags, and suggested review questions as structured JSON.
- Pulls live repo context (README, folder tree, dependencies, recent commits) so analysis is project-aware, not diff-only.
- Webhook endpoint verifies HMAC-SHA256 signatures and posts the analysis as a PR comment automatically via JWT app authentication.

HealthAssist – AI Symptom Checker and Health Companion [Live] | [GitHub]

Python, FastAPI, React (Vite), Tailwind CSS, Gemini 2.5 Flash-Lite, PyMuPDF, Vercel, Render

- Built a full-stack app that takes age, sex, symptoms, and an optional blood-report PDF, and returns a structured analysis with possible conditions, questions for a doctor, precautions, and warnings.
- FastAPI backend extracts PDF text with PyMuPDF and prompts Gemini for JSON-only output, with a regex fallback and session-scoped history.

Achievements & Leadership

- 2nd place among 800 teams**, The Return Journey Hackathon 2024 (national level; GDSC, IIT Kanpur).
- Manager, TEAM NEXT NEXUS (Prompt Engineering Club)**, Jul–Dec 2024: led prompt-engineering study groups and reviewed generative-AI mini-projects.
- Associate Manager, Madhya Bharat Association (Cultural Club)**, Jul–Dec 2024: coordinated logistics and teams for cultural events with 50+ participants.

Certifications

- AWS Certified Cloud Practitioner** (*Amazon Web Services*) [Verify]
- Oracle OCI Generative AI Professional** (*Oracle*) [Verify]
- SAP Generative AI Developer** (*SAP*) [Verify]
- MERN Full Stack** (*Ethnus*) [Verify]

Interests: AI research, number theory, art and animation, content creation
